

<p><b>1-Shield Firewall</b>                  Filters &amp; blocks known threats &amp; traffic from entering your network</p> 	<p><b>Windows Patching</b>                  Regularly patches your workstations and servers with the most recent Windows updates</p> 	<p><b>1-Guard Anti-Virus</b>                  Reacts and protects if malware is detected</p> 
<p>Servers --- Desktops --- Laptops</p>		

**1-Guard Plus**  
 Teaming up with market-leading solutions enables us to offer:

**Increased Protection**  
 Uses DNS to stop threats before they reach your users, at both the domain server level and the workstation level through agents installed on each workstation.

**Increased Prevention**  
 Regularly updates Java, Acrobat Flash and 100+ other commonly installed programs which are vulnerable to attacks.

**Increased Awareness**  
 Hands-on security training tests users in simulated phishing attacks to train them using real examples and educate them so their awareness and skills become better over time.

Built in to the "phone book" of the internet.

Protects you both inside and outside of your network.

If a threat gets through, it can't "phone home" to be activated.

**Applications**

- Adobe Flash
- Acrobat Reader
- Java
- .NET
- Chrome
- 100+ more

**UPDATED** ✓
